                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local Similarity Matches 20; Conserv
                        The invention is directed to BAP28 polypeptides, BAP28 polynuclectide sequences and regulatory region located at the 3' and 5' ends of the BAP28 coding region. The BAP28 polypeptides can be expressed by standard recombinant methodology. BAP28 polynuclectides and polypeptides have been found to be over expressed in prostate tumour cells, therefore levels of BAP28 expression and/or activity may be assayed (e.g. by polymerase chain reaction (PCR)) to diagnose patient suffering from or susceptible to prostate cancer. Antibodies specific for the BAP28 polypeptides are useful as diagnostic reagents. Biallelic markers of the BAP28 gene are useful in genetic analysis. The present sequence represents a protein encoded by a first CDNA sequence of the BAP28 gene consisting of the exons 1 to 45
                                                                                                                                                                                                                              New BAP28 polynucleotides and polypeptides overexpressed in prostate cancer cells for diagnosing prostate tumors, e.g. by hybridization or polymerase chain reaction assays.

                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                             AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

C andino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic

C activity, and can be used in gene therapy and vaccine production. (I)

C proteins and polynucleotides may be used in the prevention, diagnosis and

C treatment of diseases associated with inappropriate (I) expression. For

C example, they may be used to treat disorders associated with decreased

C expression by rectifying mutations or deletions in a patient's genome

C that affect the activity of (I) by expressing inactive proteins or to

C supplement the patients own production of (I). Additionally, (I)

C polynucleotides may be used to produce the secreted (I), by inserting the

C nucleic acids into a host cell and culturing the cell to express the

C protein. (I) proteins and polynucleotides may be used to prevent,

C diagnose and treat immune/haematopoietic-related diseases, especially

C cancers and cancer metastases of haematopoietic antigen genomic

C sequences from the present invention. AAK54942 to AAK3950 and AAM82169

C represent approach in the areanilification of the present invention
                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-DEC-2000

of the nucleic acid inhibits proliferation of a cell. Also included are:

(C (1) a vector comprising a promoter operably linked to the nucleic acid conditing a polypeptide whose expression is inhibited by the antisense concluded are:

(C encoding a polypeptide whose expression is inhibited by the antisense concluded are:

(C nucleic acid; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated containing the polypeptide or its fragment whose expression is inhibited by the containing the polypeptide; (6) inhibiting cellular containing the polypeptide; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway contained for proliferation, or that inhibits cellular proliferation; (8) clentifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the extent compound that inhibits the containing the strains is present in a culture or collection of an organism. The antisense nucleic acids are useful for identifying to retain and containing the activity and containing the activity and containing the caseful for identifying to the activity of a compound that inhibits the collection of an organism. The antisense nucleic acids are sensitived.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21-MAR-2001;

                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                           creaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abstrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations of diagnostics, forensics, gene mapping, identification of mutations and no produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at

Altering plant characteristics, useful for producing plants for enzyme opharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or more proteins. or

Claim 1; SEQ ID NO 1046; 134pp; English

CC This invention relates to a novel method for altering one or more plant CC characteristics. Specifically, it refers to identifying genes that are up CC - or down-regulated in transgenic plants overexpressing the heterodimeric CC E2Fa/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes CC generating transgenic plants for the production of growth regulators, cC enzymes, therapeutics, pharmaceuticals and animal feed products, where CC the altered plant characteristics are selected from increased yield or CC biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, blochemistry, signal CC transduction, storage lipid mobilisation and/or altered photosynthesis, ceach relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers CC during transformation of cells or tissues. The identified genes play a complete transcription factors. This polypeptide sequence is thale cress protein capressed by a gene upregulated 1.3 fold or more in plants overexpressing CC invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic add is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

                                                                                             ঠ
                                                                                                                                                                                     CC The invention relates to isolated, recombinant polypeptides (I) that have CC at least one activity of specified bacterial enzymes involved in cell CC membrane biogenesis. (I) are: UDP-N-acetylglucosamine 1-carboxyvinyl CC transferase-1 of Streptococcus pneumoniae (S.p.), Pseudomonas acruginosa (P.a.) or Staphylococcus aureus (S.a.) CTP.CMP-3-deoxy-D-manno-CC octulosonate transferase of Escherichia coli (E.c.) or Haemophilus CC influenzae (H.i.); UDP-N-acetylmuramylalanyl-D-glutamate- 2.6-CC diaminopimelate ligase of P.a.; D-alanine:D-alanine adding enzyme of S.a. CC or P.a.; D-alanine-D-alanine ligase of Enterococus faecalis (E.f.); UDP-N-CC acetylguyruvylglucosamine reductase of P.a. or H.i.; UDP-N-CC acetylguyruvylglucosamine ligase of E.f., H.i. or S.a.; UDP-N-CC acetylmuramoylalanine-D-glutamate ligase of E.f. or H.i.; UP-N-CC acetylmuramotylalanine-D-glutamate ligase of E.f. or H.i.; DP-N-CC acetylmuramate:alanine ligase of E.c.; and aspartate semialdehyde CC dehydrogenase of H.i and UDP-N-acetylmuramotylalanyl-D-glutamate (sic) of CC analysis) the structural coordinates (by X.ray diffraction CC analysis) the structural coordinates (by X.ray diffraction CC analysis) the structural coordinates (by X.ray diffraction CC design modulators of (I), potential therapeutic agents for treating CC diseases caused by the specified bacteria. This sequence represents an CC epitope from one of the proteins of the invention.
                                                                                                                       Query Match

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) cc proteins and polynucleotides may be used in the prevention, diagnostis and createment of diseases associated with inappropriate (I) expression. For cc example, they may be used to treat disorders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) cc supplement the patients own production of (I). Additionally, (I) cc supplement could be used to produce the secreted (I), by inserting the cc polynucleotides may be used to protein the cc protein. (I) proteins and polynucleotides may be used to prevent, (C diagnose and treat immune/haematopoietic-related diseases, especially cc cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cc sequences from the present invention. AAK54942 to AAK34950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Heia cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical spithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; foetal liver; gene expression; single exon nucleic acid probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  04-FEB-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09-AUG-2001.

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format part of the printed specification, but was obtained in electronic format
                                                                          The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by on such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placents. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                          Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta

                                                                                                                                                                                                                                                                        The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, by measuring gene expression, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; gene expression; heart; microarray; vascular system; cardiovascular disease; hypertension; cardiac arrhythmia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               30-JAN-2001; 2001WO-US000666.

C;Comment: This is one of the proteins that control the transfer of F plasmid.
C;Comment: There seems to be some variation or dissagreement regarding the translation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A; Molecule type: mRNA, A; Molecule type: mRNA, A; Residues: 2748-3199, 'V', 3201-3299, 'E', 3299-3314, 'G', 3316-3566 < MOR> A; Residues: 2748-3199, 'V', 3201-3298, 'E', 3299-3314, 'G', 3316-3566 < MOR> A; Rosel (Comparison of Comparison o

           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score
